

Morpho: what the sources support

Checked 6 October 2026. Four narrowly scoped checks on public links, financing, token identity and one audit. No safety score or investment recommendation.

01 / LINK SUPPORTED

Which X account does the project point to?

The Morpho website links to **@Morpho**. Its GitHub organization links to the same handle and displays GitHub verification for **morpho.org**. [1, 2]

This supports the published association. X itself returned an access error; account history and current account control were not verified.

02 / COUNTERPARTY STATEMENT

Is the financing claim independently stated?

a16z crypto says it is co-leading **\$175M** of financing alongside Paradigm and Ribbit in its 9 June 2026 announcement. [3]

Evidence is the named investor's public statement, not a bank record, token-value guarantee or endorsement by CedarProof.

03 / VERSION DISTINCTION

Which Ethereum token does the documentation name?

The current address list names MORPHO at:

0x58D97B57BB95320F9a05dC918Aef65434969c2B2

It separately lists a wrapper and Legacy MORPHO; the migration page distinguishes the old immutable token from the upgradeable version. [4, 5]

The linked Etherscan page was unavailable in this check. Live bytecode, implementation and administrator permissions were not independently inspected.

04 / AUDIT SCOPE MATTERS

What does the 2022 Omniscia report cover?

The audit directory dates this token report to **15 June 2022**. Omniscia names the **semitransferable-token** repository and specific commits, including **51d657bcfa**. Current token documentation points to **morpho-org/morpho-token**. [4, 6, 7, 8]

This report alone does not establish coverage of the current deployed token. That does not mean the current version is unaudited or vulnerable.
